Introduction

This document explains how to integrate the Clearswift Secure Email Gateway (SEG) with Microsoft Office 365 to provide enhanced Adaptive Data Loss Prevention (A-DLP) defenses and complement the Office 365 hygiene components.

There are numerous Office 365 packages suited to different customer requirements. This document is based on the Office 365 Enterprise E3 package which is Microsoft’s target platform for mid and larger sized enterprises.

This document assumes that you are familiar with how to configure the SEG. If you would like more information on basic configuration of the SEG, please refer to the online help.

You will need to ensure that any SPF, DKIM, DMARC, etc. records that you have published by your DNS provider will need to be updated to include details of your SEG(s). If your domain is managed by Microsoft, you may need to contact Microsoft directly to get your DNS records updated.

It is recommended that you install a valid TLS certificate on your SEG, as this will allow you to configure a TLS connection between your Office 365 instance and SEG, where you can validate the TLS certificate used by the SEG.

The process for configuring the Clearswift SEG to work properly with Microsoft Office 365 can be broken down into several steps:

- Add *.outbound.protection.outlook.com to Internal Email Servers
- Enable global spam settings
- For each hosted domain, where the SEG will be receiving outbound messages from O365,
  - Configure O365 to add the access token
  - Wait for any messages already in the queue to go through
  - Configure the access token for that domain in the SEG

Failure to perform these steps may leave you with a Gateway that permits other O365 tenants to use your Gateway for routing and also means that inbound mail from other O365 tenants are not checked for spam.
Configure the SEG to Scan Inbound Email Before Routing to Office 365

In this scenario your organization should ensure that your DNS MX records are directed to your SEG server(s).

The SEG(s) will then process emails according to policy and valid messages will be routed to your organization’s Office 365 deployment.

To configure the SEG to accept messages for your organization’s domain and route traffic to your Office 365 instance:

1. In the Clearswift Secure Email Gateway user interface, click on the System > SMTP Settings > Mail Domains and Routing.
2. In the Hosted Domains tab, click on New.
3. In the New Hosted Domain dialog, enter your organization’s email domain (e.g. aneesya.com) into the Domain field and click on Add.

4. In the Email Routing tab, click on New.
5. In the Add Email Route dialog:
   a. Enter your organization’s email domain (e.g. aneesya.com) into the Domain field.
   b. Select the To a server radio button.
   c. Enter the Host Name for your organization’s Office 365 deployment (this can be obtained from your Office 365 portal, under Domains and the Domain Settings for the relevant domain, e.g. aneesya-com.mail.protection.outlook.com) in the Server field.
   d. The value in the Port field should be 25.
   e. Ensure that the TLS drop down is set to none (you can enable mandatory TLS later if you wish, please refer to the Help documentation).
      i. It is recommended that you enable opportunistic TLS under System > Encryption > TLS Configuration as a minimum when communicating between Office 365 and your SEG(s).
   f. Ensure that the Authentication drop down is set to None.
   g. Click on Add.
Add Email Route

Authentication is not enabled.
Global TLS is disabled.

Domain: aneesya.com
Route:  
- Using DNS
- To a server
- To an MTA group
Server: aneesya-com.mail.protection.outlook.co
Port: 25

Use the outbound TLS configuration from this connection profile:
TLS: Select TLS Configuration

Use these authentication settings when connecting to the email server:
Authentication: None

Add  Cancel
Configure the SEG to Scan Outbound Email from Office 365

You now need to configure your SEG to allow Office 365 to send messages through your SEG. You can do this by adding *.outbound.protection.outlook.com as a Client Host under your Internal Email Servers Connection. This then treats any servers that have hostnames ending with outbound.protection.outlook.com as an internal email server. This is necessary, because your emails originating from Office 365 can be sent from any one of thousands of mail servers.

To do this:

1. In the Clearswift Secure Email Gateway user interface, click on the System > SMTP Settings > Connections.
2. Select the Internal Email Servers entry and then click on Edit.
3. In the Client Hosts tab, click on New.
4. In the New Client Host dialog:
   a. Enter the following in the Host field: *.outbound.protection.outlook.com
   b. Click on Add.

It is recommended that you configure mandatory TLS between the SEG and Office 365. To do this:

1. In the Clearswift Secure Email Gateway user interface, click on the System > SMTP Settings > Connections.
2. Select the Internal Email Servers entry and then click on Edit.
3. Click on the TLS Settings tab.
4. Configure the **Outbound (When Acting as a Client)** section as follows:
   a. Select the **Use Mandatory TLS for this connection profile** check box.
   b. Select the **Use global settings (Minimum permitted TLS version: TLS 1.2)** check box.
   c. Select the **Use global settings (Medium)** check box.
   d. Ensure the **No validation** radio button is selected. Click on **Save**.

5. Configure the **Inbound (When Acting as a Server)** section as follows:
   a. Select the **Require valid client certificate** check box.
   b. Click on **Save**.
6. Click on the System > SMTP Settings > Mail Domains and Routing.
7. Click on the Email Routing tab.
8. Use the check box to select the entry for your organization’s email domain that you created earlier and then click on Edit.
9. In the Edit Email Route dialog:
   a. Use the TLS drop down to select: Internal Email Servers
   b. Click on Update.

Please note that for security reasons, Office 365 certificates do change from time to time, so you should consult Microsoft documentation to obtain the current certificate details: https://docs.microsoft.com/en-us/office365/securitycompliance/exchange-online-uses-tls-to-secure-email-connections
Configure the SEG to Detect Spam in an Office 365 Environment

If using SEG’s Office 365 integration you should only enable DMARC, DKIM, Junk Mail and Spoof detection. The other spam detection techniques must not be enabled.

For more information on configuring Spam detection, please see the Online Help.

Note: It is important to enable Spoof detection to allow detection of rogue O365 tenants trying to send mail through your SEG and pretending to be your organization.
Configure an Office 365 Connector to Route Outgoing Email to the SEG

The next step is to reconfigure your organization’s Office 365 portal to redirect all outbound email to the SEG server(s). You should begin by creating a new connector to route emails from your Office 365 deployment to the SEG server(s).

To do this:

1. In your organization’s Office 365 instance, click on Admin centers, Exchange.
2. Click on mail flow.
3. Click on connectors.
4. In the connectors section, click on +.
5. In the Select your mail flow scenario dialog:
   a. Use the From drop down to select Office 365.
   b. Use the To drop down to select Partner organization.
   c. Click on Next.

6. In the New connector dialog:
   a. Enter a name for the connector.
   b. Enter a description.
   c. Ensure that the Turn it on check box is selected.
   d. Click on Next.
7. In the When do you want to use this connector? dialog:
   a. Select the **Only when I have a transport rule set up that redirects messages to this connector** radio button.
   b. Click on **Next**.

8. In the How do you want to route email messages? dialog:
   a. Select the **Route email through these smart hosts** radio button.
   b. Select +.
   c. In the add smart host dialog, enter the IP address/hostname of the SEG and then click on **Save**.
   d. Repeat for any additional SEGs.
   e. Click on **Next**.
9. In the How should Office 365 connect to your partner organization’s email server? dialog:

   a. Specify if a mandatory TLS connection should be used and the appropriate settings (it is recommended to at least use the default settings and you should consider validating against the certificate used by the SEG).
   
   b. Click on **Next**.
10. In the Confirm your settings dialog, click on **Next**.

11. In the Validate this connector dialog, enter one or more email addresses to send the validation message to and then click on **Validate**.

12. Click on **Close**.

13. Click on **Save**.

You now have a connector configured to route messages from Office 365 via the Secure Email Gateway.
Configure an Office 365 Rule to Route Outgoing Email to the SEG

The next step is to configure your organization’s Office 365 portal to route emails to the SEG server(s) for scanning via the new connector.

To do this:

1. In your organization’s Office 365 instance, click on Admin centers, Exchange.
2. Click on mail flow.
3. Click on rules.
4. In the rules section, click on +, Create a new rule...
5. In the new rule dialog:
   a. Enter a name for the rule.
   b. Click on More options...
   c. Use the Apply this rule if... drop down to select The sender..., is external/internal.
   d. In the select sender location dialog:
      i. Use the drop down to select Inside the organization.
      ii. Click on OK.
   e. Click on add condition.
   f. Use the Apply this rule if...and drop down to select The recipient..., is external/internal.
   g. In the select recipient location dialog:
      i. Use the drop down to select Outside the organization.
      ii. Click on OK.
   h. Use the Do the following... drop down to select Modify the message properties..., set a message header.
   i. Click on the Set the message header *Enter text... link.
   j. In the message header dialog:
      i. Enter X-Clearswift-M365 as the name for the message header.
      ii. Click on OK.
   k. Click on the to the value *Enter text... link.
   l. In the header value dialog:
      i. Enter the Access Token for the message header. This can be any alphanumeric string but for security we recommend using a GUID either generated online or via PowerShell. It is also possible to use the Gateway UI to create it. See Error! Not a valid bookmark self-reference.
      ii. Click on OK.
   m. Click on add action.
   n. Use the Do the following...and drop down to select Redirect the message to..., the following connector.
   o. In the select connector dialog:
      i. Use the Connector drop down to select the outbound Office 365 to partner organization connector that you created earlier (e.g. Office 365 to Azure SEG).
      ii. Click on OK.
   p. Click on Save.
Add X-Clearswift-M365 header

Name:
Add X-Clearswift-M365 header

*Apply this rule if...
- The sender is located...
  and
- The recipient is located...
  add condition

*Do the following...
- Set the message header to this value...
  add action
  Set the message header 'X-Clearswift-M365' to the value '59fb81b6-e633-423d-ba6d-57350973cfe8'
- Use the following connector...
  add exception

Properties of this rule:
Priority:
2

Save  Cancel
Configure the SEG to Prevent Relaying Spoofed Email from Office 365

To further limit the ability of third parties to use Office 365 accounts to relay spoofed messages through your SEG it is recommended that you configure Office 365 to add an X-Header to all of the emails that originate from each of your domains. You can then configure your SEG to only deliver messages that originate from your email domains and contain the appropriate X-Header value. This will help to address any attempts by third parties to use their own Office 365 account to spoof messages so that they appear to originate from one of your email domains.

The “Configure an Office 365 Rule to Route Outgoing Email to the SEG” section of this guide will take you through the steps to configure Office 365 to add an X-Header containing a specific value to any emails originating from one of your domains. Please note that you should not apply this policy change to your SEG(s) until you have completed the steps in the “Configure an Office 365 Rule to Route Outgoing Email to the SEG” section.

In this step, you will configure the SEG to scan for that X-Header and the correct value. To do this:

1. In the Clearswift Secure Email Gateway user interface, click on the System > Mail Domains and Routing.
2. Select your own domains.
3. Click on Configure Microsoft 365 Access Tokens.
4. In the Configure Microsoft 365 Access Tokens dialog, select the Add a new access token to the selected domains check box.
5. In the Access token field, you can enter the string used in l.i
6. In the Comment field, you can enter an optional description.
7. Click on OK.
Note:

The X-header is stripped after processing to ensure that the details of the access token is not exposed externally.

It is possible to define multiple Access Tokens per domain.

It is also necessary that the Global Spoof Detection option is enabled in the Spam Policy to hold/reject attempts to send through your Gateway using your domain name.
Configure Office 365 Connector to Accept Incoming Email from the SEG

The next step is to reconfigure your organization’s Office 365 portal to accept inbound email from the SEG server(s). This is strictly only necessary if you wish to enforce TLS on this connection.

To do this:

1. In your organization’s Office 365 instance, click on **Admin centers, Exchange**.
2. Click on **mail flow**.
3. Click on **connectors**.
4. In the connectors section, click on +.
5. In the Select your mail flow scenario dialog:
   a. Use the From drop down to select **Partner organization**.
   b. Use the To drop down to select **Office 365**.
   c. Click on **Next**.

6. In the New connector dialog:
   a. Enter a name for the connector.
   b. Enter a description.
   c. Ensure that the **Turn it on** check box is selected.
   d. Click on **Next**.
7. In the How do you want to identify the partner organization? dialog:
   a. Select the **Use the sender’s IP address** radio button.
   b. Click on **Next**.
8. In the What sender IP addresses do you want to use to identify your partner? dialog:
   a. Select **+**.
   b. In the add ip address dialog, enter the IP address of the SEG and then click on **OK**.
   c. Repeat for any additional SEGs.
   d. Click on **Next**.
9. In the What security restrictions do you want to apply? dialog:
   a. Specify if a mandatory TLS connection should be used and the appropriate settings (it is recommended to at least use the default settings and you should consider validating against the certificate used by the SEG).
   b. Click on **Next**.
10. In the Confirm your settings dialog, click on **Next**.

You should now be able to receive messages securely in Office 365 via the Secure Email Gateway.
Configure the SEG for a hybrid environment

If you have a hybrid environment where email can be sent out via O365 or Exchange using the same email domain you should use add the **X-Clearswift-M365** token across each channel.

For separation you can define multiple tokens for each domain you host, and the SEG can be configured for each.

For example:

![Configure Microsoft 365 Access Tokens](image)
Configure the SEG to Only Send and Receive Messages from Valid Email Addresses in your Domain

To limit the ability of third parties to use Office 365 accounts to relay spoofed messages through your SEG it is recommended that you replace the standard My Company address list on the SEG with one that contains only valid email addresses within your organization.

To do this:

1. In the Clearswift Secure Email Gateway user interface, click on the **Policy > Policy References > Email Addresses**.
2. Create a My Company (Valid Addresses) address list by performing one of the following:
   a. Edit the My Company address list to contain all of your organization’s valid email addresses and remove any wildcarded entries (e.g. *@aneesya.com).
   b. Create a new **LDAP Synchronized Address List** that will query your directory server for all of the valid email addresses in your organization.
3. Click on the **Policy > Mail Policy Routes**.
4. Replace all instances of the My Company address list with the newly created My Company (Valid Addresses) list.

You have now limited the ability of third parties to relay emails through your SEG(s) from inside Office 365.
Configure the SEG to Scan Internal Office 365 Email

It is possible to route your internal Office 365 emails via the SEG in order to enforce an internal email security and A-DLP policy.

If you wish to do this, the first step is to configure your SEG to allow Office 365 to send internal emails through your SEG. You will need to create an internal My Company (Valid Addresses) to My Company (Valid Addresses) policy route.

To do this:

1. In the Clearswift Secure Email Gateway user interface, click on the Policy > Manage Policy Definition > Mail Policy Routes.
2. Click on New.
3. In the For Mail Sent section, click on New.
4. In the Add Route Selector dialog:
   a. In the From section, select the My Company (Valid Addresses) check box.
   b. In the To section, select the My Company (Valid Addresses) check box.
   c. Click on Add.

5. Ensure that the By Default Perform This Disposal Action section is set to: Deliver the message

![Add Route Selector](image)
6. Click on the **Policy > Manage Policy Definition > Mail Policy Routes.**

7. Select the **My Company (Valid Addresses) to My Company (Valid Addresses)** policy route and move it to the top of the policy route table.

You have now configured your SEG to scan internal Office 365 emails in order to enforce a security and A-DLP policy on them. You can create a more granular policy for incoming, outgoing and internal emails by creating additional policy routes as required.
Configure Office 365 to Route Internal Email via the SEG

The next step is to reconfigure your organization’s Office 365 portal to route internal emails to the SEG server(s) for scanning.

To do this:

1. In your organization’s Office 365 instance, click on Admin centers, Exchange.
2. Click on mail flow.
3. Click on rules.
4. Select the outbound Office 365 rule that you created earlier (e.g. SEG Interceptor) and then click on the Edit button (the pencil icon).
5. In the Rule dialog:
   a. Use x to delete the **The recipient is located...Outside the organization** condition.
   b. Click on **Save**.

You have now configured Office 365 to route internal emails via the SEG in order to enforce an internal email security and A-DLP policy. If you wish to exempt certain internal emails from being routed via the SEG, then you can use the add exception button in the rule that you just amended to exempt the appropriate emails from the rule.
Configure the SEG to Detect Malicious URLs in an Office 365 Environment

As well as detecting Malware and Spam, the SEG can also be configured to detect and block messages that contain malicious URLs.

To do this:

1. In the Clearswift Secure Email Gateway user interface, click on the Policy > Manage Policy Definition > Mail Policy Routes.
2. Select route 2, which should be Anyone to My Company.
3. Click on Edit which will open the Modify Policy Route page.
4. In the Unless One of These Content Rules Triggers panel, click on New.
5. In the Add a Content Rule dialog, click on Create New and select Sanitize Message and then select Close.
6. This will have created a Sanitize Message content rule at the bottom of the list of rules.
7. Select this new rule and press Edit.
8. In the What To Look For panel, click on Click here to change these settings.
9. In the URLs and Hyperlinks:
   a. Select Message subjects.
   b. Select Message bodies.
   c. Select Only the URLs defined in the selected lists.
   d. Select both Sophos and MailShell URL list.
   e. Click Save.
10. In the What To Do panel, click on Click here to change these settings.
11. In the Disposal Action, change the Perform no action to Hold in Virus area and click Save.
12. Once again, from the **Policy** > **Manage Policy Definition** > **Mail Policy Routes**, select the route and click **Edit** to display the **Modify Policy Route** page.

13. In the **Modify Policy Route** page, select the **Sanitize Message** content rule (currently at the bottom of the list) and click the up arrow until the rule is at position 2 in the list.
Further Information

This document explained how to integrate the Clearswift Secure Email Gateway (SEG) with Microsoft Office 365 in order to provide enhanced Adaptive Data Loss Prevention defenses and complement the Office 365 hygiene components.
